

$z \approx 10$

EXTRAGALACTIC SIGNALS

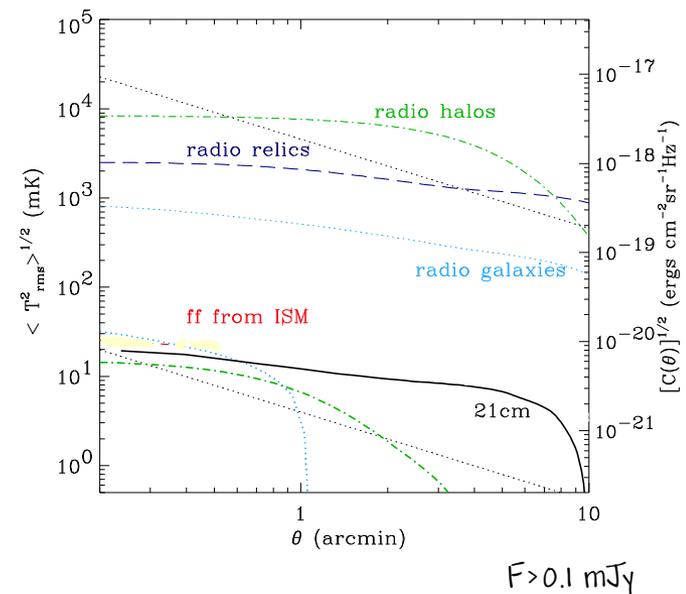

Point Sources:

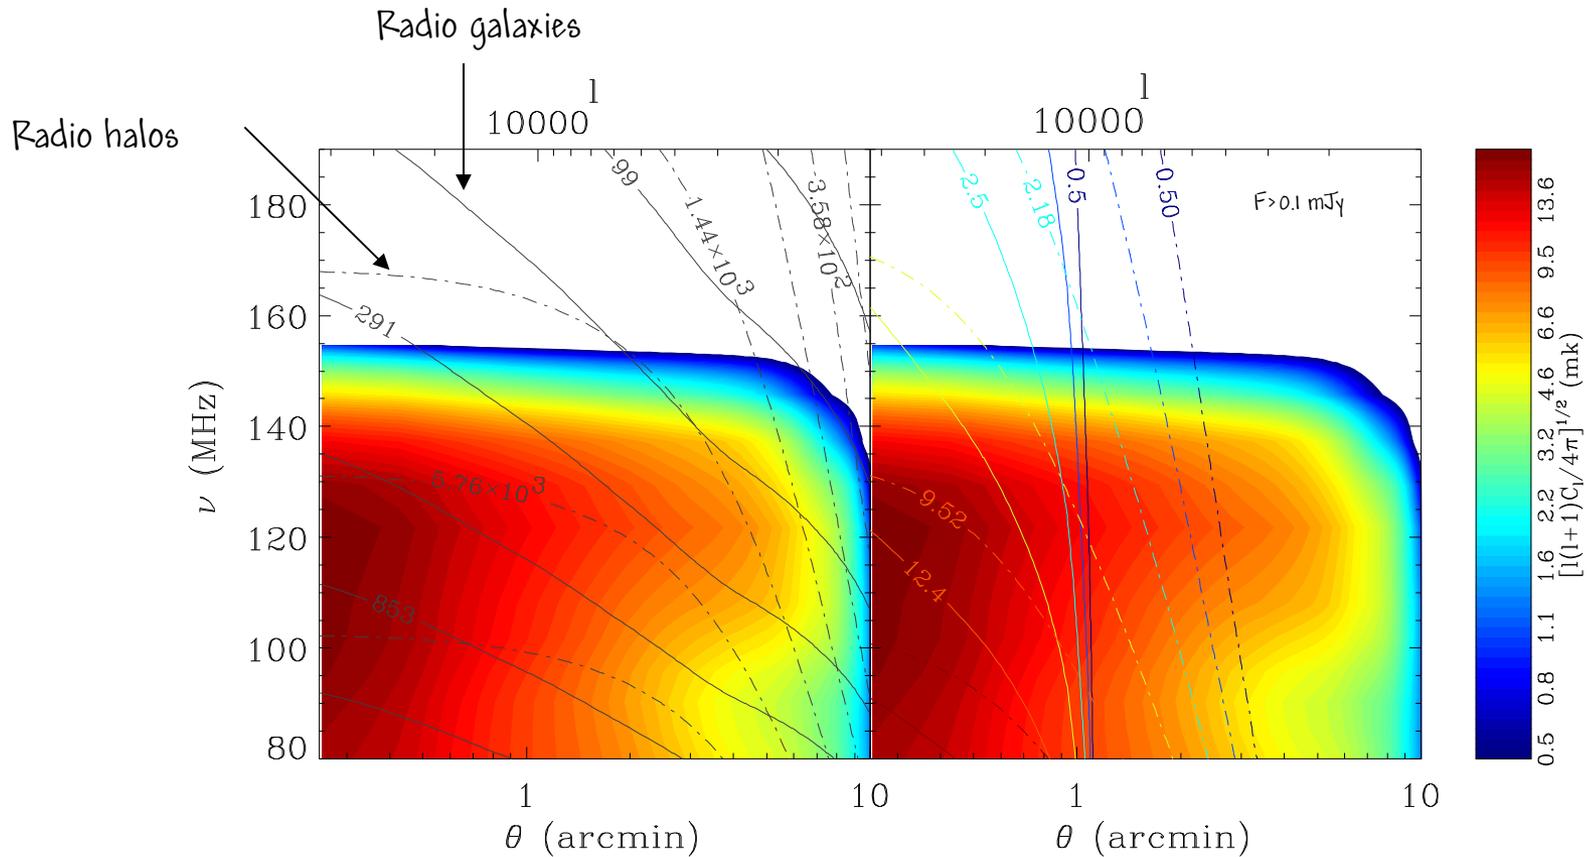

- Free-free emission from IS HII regions
- Low-z radio galaxies

Extended Sources:

- Free-free emission from IG HII regions
- Synchrotron emission from cluster radio halos & relics

Late reionization case @115 MHz

After removal of bright sources ($F > 0.1 \text{ mJy}$),
 at scales $> 1 \text{ arcmin}$ 21cm emission line is free from
 extra-galactic foreground contamination
